

## **System requirements required to communicate with DeltaPix cameras**

The minimum system requirements are

- Pentium III
- 1.3 GHz or similar
- 256 MB RAM
- 15 GB free hard disk space
- USB 2.0 Port
- Windows XP or Windows 2000.

The critical factor is the speed of the CPU which should be minimum 1.3 GHz. If the computer is not fast enough, the computer will not be able to receive the video from the camera.

Furthermore, a laptop with an external USB 2.0 support through a PC card will generate problems, and this is due to the fact that there is not enough power. The results will be lines in the high resolution pictures.

The solution is an external power supply cable to be connected to the camera. The requirements for this power supply are

- 6V regulated DC
- Plug with + in the centre
- Outer plug diameter 5.6 mm
- Inner plug diameter 2.1 mm
